

Why sell our CAD software?

Learn about our products and individual terms of cooperation.

ArCADiasoft is a recognized CAD software developer, which has been present on the Polish market for 20 years. It also offers software and software development cooperation services for the construction industry in practically all EU countries. In Poland we are the largest IT company of this type. We are also one of the leading European developers. Our programs have won numerous awards and they successfully compete with products from Autodesk, Graphisoft or Nemetschek.

We are the author of more than 100 CAD programs.

Our products support thousands of architects, engineers and installers every day.

The company's mission is to create the highest quality software at competitive prices, covering virtually every field of design — from architecture and structure, through installations and cost estimation, to management and comprehensive handling of design offices, individual designers and groups of independent design participants working together at the design creation stage. The idea behind our work is to act for the benefit of the customer, therefore the standards of all employees are professionalism and the pursuit of ever higher quality of the software offered. The company's flagship product is ArCADia BIM – a renowned object-oriented system that is appreciated by European architects and construction engineers. The software is a complex BIM (Building Information Modeling) design system; a tool for creating technical documentation and simultaneously a comprehensive building information database, that enables different designers to cooperate among their various locations.

We are looking to widen our community of partners. Contact us today and start selling innovative software for the building industry.
